PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building scalable web applications, RESTful APIs, and SaaS platforms using React.js, Next.js, and Node.js. Deploying production-grade systems on cloud platforms. Experienced with PostgreSQL, SQL query optimisation, JWT-based authentication, and event-driven backend pipelines capable of high throughput. Familiar with Agile workflows, Git-based version control, and CI/CD practices. Grounded in core Computer Science fundamentals including OOP, DBMS, and Machine Learning. Seeking a Full-Stack Developer role to build scalable eCommerce and SaaS products.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go (Golang), SQL, HTML/CSS

Frontend: Next.js 15, React 19, Tailwind CSS 4, Framer Motion, Recharts, TanStack Query 5

Backend: Node.js, Express.js, FastAPI, Next.js API Routes, RESTful API Design, Redis (Caching), Zod, Pydantic

ML / Data Science: Scikit-Learn, Pandas, NumPy, Joblib, Time-Series Forecasting, Feature Engineering

Database & ORM: PostgreSQL, MongoDB Atlas, Prisma 6, SQLAlchemy, Mongoose ODM

Auth & Security: Clerk, Better Auth, Google OAuth, JWT, Stripe (Webhooks)

APIs & Integrations: Twilio (SMS/WhatsApp), Resend, Cloudinary, Pollinations.ai, WebRTC, Socket.IO

DevOps & Tools: Docker, Kubernetes, CI/CD Pipelines, MS Azure, Vercel, Railway, Git/GitHub, Postman, Agile/Scrum

PROJECTS

Fasal AI – AI-Powered Crop Price Intelligence Platform | *Next.js 15, React 19, FastAPI, PostgreSQL, Prisma, Scikit-Learn, Twilio, Vercel* [\[Live Demo ↗\]](#)

- Built a bilingual (English/Hindi) full-stack web app using Next.js 15 and React 19 with a responsive farmer dashboard for tracking real-time crop prices across government mandis, integrating the Agmarknet API with geolocation-based “Near Me” search.
- Built a high-throughput Python FastAPI microservice (containerised with Docker, deployed on Railway) using Scikit-Learn to generate 7/15/30-day price forecasts; implemented in-memory model caching (ModelStore pattern) to achieve low-latency inference on repeated requests.
- Architected a PostgreSQL database with Prisma ORM, writing optimised SQL queries for price analytics; built an event-driven alert pipeline with automated daily sync and multi-channel notifications via Twilio (SMS/WhatsApp) and Resend (Email).

DentAssist AI – AI-Powered Dental Assistant | *Next.js, React, Tailwind CSS, Vercel, AI Voice API* [\[Live Demo ↗\]](#)

- Architected a production-grade SaaS platform on Next.js with scalable RESTful API routes, serving 1,200+ users with 24/7 AI voice call consultations and tiered subscription management (Free / \$9 / \$19 per month).
- Engineered usage-gated feature access, appointment booking flows, and an eCommerce-style checkout — demonstrating direct experience with subscription billing, user entitlements, and conversion-optimised UI/UX patterns.
- Designed a fully responsive Next.js frontend with dynamic symptom assessment, AI-generated dental care plans, and a dentist booking interface, delivering a production-grade user experience across all device sizes.

BrandForge AI – AI-Powered Print-on-Demand Platform | *React 19, TypeScript, Express, Prisma, PostgreSQL, Cloudinary, Stripe* [\[Live Demo ↗\]](#)

- Built a full-stack eCommerce platform (React 19, TypeScript, Express, PostgreSQL) with an interactive Fabric.js canvas editor, AI artwork generation, and dynamic Cloudinary mockup rendering across 5 product types — directly relevant to scalable eCommerce SaaS development.
- Implemented a 5-step AI art pipeline (prompt refinement → generation → background removal → cloud upload → product overlay) using Cloudinary URL-based transformations, eliminating server-side image processing.
- Integrated Stripe checkout with webhook-driven order lifecycle management, OAuth 2.0 session auth, and Zod schema validation — ensuring secure payments, XSS-resistant authentication, and end-to-end type safety across the full stack.

Synchronous Communication Hub | *React, Node.js, Express.js, MongoDB Atlas, WebRTC, Socket.IO* [\[Live Demo ↗\]](#)

- Engineered a high-throughput real-time messaging platform (React.js, Node.js, Socket.IO) supporting concurrent active threads, interactive polls, and drag-and-drop file sharing — designed for low-latency delivery across multiple simultaneous users.
- Integrated scalable 1-on-1 and group video conferencing via WebRTC with screen sharing and live reactions, demonstrating experience building systems that handle high concurrency and real-time data streams.
- Implemented JWT-based user authentication, automated background job processing, and production-level error monitoring to ensure application reliability and security.

EDUCATION

Bachelor of Technology – Computer Science & Engineering (AI/ML) Expected: July 2027

Baderia Global Institute of Engineering and Management | GPA: 7.92
